MARSICO MIDCAP GROWTH FOCUS FUND

(MXXIX/MIDFX)

A High-Conviction Portfolio Of Faster Growing Mid-Cap Companies

The Marsico Midcap Growth Focus Fund (the "Fund") is a portfolio of innovative, faster-growing mid-capitalization companies. The Fund features a high-conviction portfolio normally holding 35-50 companies the adviser believes possess high-quality fundamentals and are positioned for a long growth runway.

The companies selected:

- » **Feature faster growth** from a variety of factors including earnings, cash flow and margin expansion, among others, relative to their peer group and the broader stock market.
- » **Provide innovative solutions** using creative approaches to businesses and consumers.
- » **Offer a long growth runway** with the potential for superior sustainable revenue and earnings growth.

"Innovative companies capitalize on opportunities across sectors and demographics."

Identifying Themes Fueling Mid-Cap Growth

The portfolio managers seek to identify macroeconomic trends that are fueling the growth of select mid-sized companies. These secular themes, highlighting opportunities where innovative companies are growing faster than the broad stock market, drive the Fund's portfolio discovery process. Examples of these themes include:

- » **Industrial Automation:** The manufacturing and transportation of goods are streamlined by technological advances in productivity, automation, and logistics. These companies are creating efficiencies in the internet of things, machine vision and barcode readers to inspect and identify parts, and supply chain management software, to name a few.
- » **Changing Consumer:** Consumer behaviors are shifting in tandem with changing demographic trends and demand for goods and services. For example, trends including value-based retailing and travel are a rapidly growing segment of the consumer market.
- » **Life Sciences Innovations:** Advances in life sciences can provide a better patient experience. For example, diabetes affects over 10% of the U.S. population and prevalence is increasing globally as well. Companies focused on diabetes treatment are providing improvements in the day-to-day management of the disease, such as continuous glucose monitoring and innovative insulin delivery methods.

³ The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. ©Morningstar, Inc. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. The Fund received 3 stars for the 3-, 5-, and 10-year periods ended 6/30/2023 among 519, 486, and 379 Mid-Cap Growth funds, respectively. Past performance is no guarantee of future results. Recent performance may have been negative.

⁴ References to historical performance represents the Investor Class shares, which was the only class of shares available for purchase during the relevant period.

⁵ Risk measures based on monthly return calculation against the S&P 500 Index. Capture Ratio measures the percentage of index (market) performance an investment “captured” during periods when the index achieved gains (up capture) or declined (down capture). For example, a capture ratio of 100 means investment performance went up or down exactly the same amount as the index.

⁷ The Russell Midcap Growth Index (the “Underlying Index”) measures the performance of the mid-capitalization growth sector of the U.S. equity market, and is composed of mid-capitalization U.S. equities that exhibit growth characteristics. It is a subset of the Russell Midcap® Index, which measures the performance of the mid-capitalization sector of the U.S. equity market. The Underlying Index measures the performance of equity securities of Russell Midcap Index issuers with higher price-to-book ratios and higher forecasted growth. The index described above is unmanaged and not available for direct investment. For comparison purposes, it should be noted that the index described above does not charge fees and has no expenses.
